Inspection, repair and maintenance programs that maximize your equipment investment, limit risks and dramatically improve overhead crane safety.

Your overhead cranes and hoists are complex and potentially dangerous pieces of machinery that require regular maintenance, periodic safety inspections as well as proper repairs to remain in a productive and safe operating condition.

Many crane owners understand that their own in-house maintenance personnel lack the highly specialized skills and expertise required to safely maintain and repair overhead cranes. Using in-house maintenance departments to work on overhead lifting equipment is simply too great of a safety and liability risk for today's work environment.

GP CRANE & HOIST SERVICES' Inspectors and Technicians are highly skilled on all facets of crane inspection and repairs. Not only will we fix your crane correctly, we will save you a considerable amount of money and production time as well.

#### **SERVICE**

- OSHA & ANSI COMPLIANCE INSPECTIONS
